Business Plan

Overview

What is a Business Plan?

A business plan is a written overview of your business venture. It describes both your short-term and long-term goals and objectives for the business you are starting or expanding.

A business plan gives the business owner and others who read the plan a thorough understanding of the product or service the business is offering, the marketplace in which the business will operate, measurable goals and objectives for the business to meet, financial forecasts, and an overall sense of whether the business is viable to be successful.

Why is a Business Plan Important?

A business plan helps you to think through and evaluate your business idea, as well organize and present the information to allow you to communicate it easily to others.

It is not a static document. As market conditions change, the plan should be updated to reflect the new situation in which the business is operating.

Whether used as a preliminary study or an action strategy, the business plan is a blueprint for how the business will evolve. Planning helps to identify and prevent serious mistakes. Errors on paper are easily corrected; in real life they can be financially and psychologically disastrous.

Tips for Preparing Your Business Plan

This business plan is a generic outline suitable for all types of businesses. However, you should modify it to suit your particular circumstances. It typically takes several weeks to complete a good plan. Most of that time is spent in research and re-thinking your ideas and assumptions. Make time to do the job properly. Those who do, never regret the effort. Finally, be sure to keep detailed notes on your sources of information and the assumptions underlying your financial data.

The business plan should be prepared in a professional manner, while considering the reader's reason for reviewing the plan. Therefore, the plan should be organized with easy to find sections and exhibits. After you have completed the plan, it is useful to have others review it prior to forwarding it to potential lenders or investors. In light of the confidential nature of the content contained within the business plan, it is important to carefully control its distribution.
